

Name: Arsela Mallick

Lesson 5: If-elif-else Statements

1. Make a list of 5 or more usernames, including an admin account. Imagine you are writing code that will welcome people to your application on login. Loop through the list and print your greeting.
 - a. If the admin account logs in, give them a special greeting. They're the admin, after all!
 - b. Other users can get the generic greeting

```
users = ["sushil0v3r", "mrbean", "muskelon", "xaea12", "admin",  
"michelleobamaofficial", "1bunny1"]  
  
for app in users:  
    if app == "admin":  
        print("Welcome to the FlapTap app, admin! We are honored to have you with us.")  
    else:  
        print("Welcome to the FlapTap app!")
```

2. Store numbers 1-10 in a list
 - a. Loop through the list
 - b. Use an if-elif-else chain inside your loop to print the ordinal ending for each number – for example – 1st, 2nd, 3rd ... etc.

```
list = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10]  
  
for numbers in list:  
    if numbers == 1:  
        print(str(numbers) + "st")
```

```
elif numbers == 2:  
    print(str(numbers) + "nd")  
elif numbers == 3:  
    print(str(numbers) + "rd")  
else:  
    print(str(numbers) + "th")
```
